INTEGRAN AND ADVANCED COMPOSITES GROUP (ACG) ENTER INTO A JOINT DEVELOPMENT AGREEMENT FOR COMPOSITE PART TOOLING

TORONTO, ON, Canada - October 19, 2007 – Integran Technologies Inc. (Toronto, ON, Canada) and Advanced Composites Group (ACG, Heanor, UK and Tulsa, USA) announced today that they have entered into a Joint Development Agreement (JDA) for advanced carbon fibre composite (CFC) tooling solutions based upon Integran's Nanovar® technology platform, enabling the delivery of complete tooling solutions to composite part manufacturers.

Nanovar®, is a low thermal expansion, very hard metal coating that increases surface hardness of carbon fibre composites by 15 times, adding durability and longevity to tools resulting in significantly reduced manufacturing costs. "ACG's expertise in tool design and thermoset resin technology, and their market position as the leading supplier of pre-impregnated composite tooling materials will significantly shorten the time to market for this advanced tooling technology" said Frank Cotter, Chief Operating Officer of Integran.

ACG provides a complete package of advanced composite tooling solutions, from innovative tool design through to a variety of novel LTM® and HTM® material formats. Jon Mabbitt, Managing Director of ACG, said "ACG is very proud of its reputation for innovation and expanding the composite tooling market. Our collaboration with Integran on Nanovar is a natural progression and we see great potential once the technology is fully developed for production"

About Advanced Composites Group (ACG)

Manufacturer of advanced composites materials and components. ACG specialises in the manufacture of high performance composite materials for a diverse range of industries such as motorsport, aerospace, marine, automotive, construction, wind energy and leisure sports. The main focus of the Group's business, which operates through four divisions, is the manufacture of prepregs for components and tooling. ACG has manufacturing operations in the UK in Heanor near Derby, USA in Tulsa and South Africa in Cape Town. It is managed from its head office in Heanor and employs around 450 worldwide of which 260 are in the UK.

About Integran

Integran Technologies Inc. is a world leader in the development and commercialization of advanced metallurgical nano-technologies. Integran's affiliated companies include: Morph Technologies (Toronto, Canada) which is focused on advanced materials solutions for the automotive sector; Powermetal Technologies (Carlsbad, CA) which develops and manufactures products for the sports equipment and consumer product sectors; and Integran Defense Systems (Pittsburgh, PA) which develops leading-edge technologies for defense and homeland security.
